

David J. Mott, PhD

Principal Economist

DMOTT@OHE.ORG

ABOUT

David leads OHE's 'measuring and valuing outcomes' theme. His research interests centre around the valuation of health care benefits, which includes describing health and valuing health states for the generation of quality-adjusted life years, as well as the valuation and incorporation of broader outcomes into the health technology assessment process. David has methodological expertise in stated preference methods such as discrete choice experiments, time trade-off, and contingent valuation. He regularly contributes to the ISPOR Health Preference Research special interest group and is a member of the EuroQol Group Association. David regularly disseminates his research at international health economics conferences and in peer-reviewed journals.

EXPERTISE

Measuring quality of life	Patient reported outcomes	Patient preferences
Health state valuation	Structured decision making	Priority setting
Willingness to pay	Discrete choice experiments	Valuation of health in children
